

AGROFARMACI IMPIEGATI IN VITICOLTURA

I dati sono tratti da WinBDF Banca Dati Fitofarmaci di Ecospi srl Milano, aggiornati ad aprile 2007: database professionale di tutti i fitofarmaci autorizzati in Italia, disponibile nella versione per personal computer e palmare. Per maggiori informazioni e aggiornamenti: www.winbdf.it. Si ringrazia il Dr Marco Borroni per la gentile collaborazione.

I nomi di alcuni prodotti sono stati abbreviati, conservandone la specificità. Ci scusiamo per eventuali errori.

Nell'elenco che segue, per ogni p.a. è indicato il nome commerciale che lo contiene, che verrà ripetuto altre volte quando si tratta di miscele con più principi attivi. Sul nostro sito www.viten.net, da questo stesso database, sono invece elencati i prodotti commerciali ed i corrispondenti principi attivi contenuti.

Legenda delle formulazioni

CS = sospensione acquosa di microcapsule	EO = emulsione acqua/olio	ME = microincapsulato disperso	TB = compresse solubili in acqua
DC = concentrato dispersibile	EW = emulsione olio/acqua	MG = prodotto microgranulare	WG = granuli dispersibili in acqua
DF = microgranuli idrodispersibili	FL = pasta liquida	PT = pellet	WP = polvere bagnabile
DP = polvere secca	GR = prodotto granulare	SC = sospensione concentrata	
EC = emulsione concentrata	L = liquido, soluzione (ind. generica)	SL = liquido (concentrato) solubile in acqua	
	LE = liquido emulsionabile	SP = polvere solubile in acqua	

Legenda delle classi tossicologiche

 + = Molto tossico	 Xn = Nocivo	 = Pericoloso per l'ambiente
 = Tossico	 Xi = Irritante	

Principi attivi e prodotti comm.	p.a. g/l o kg	Ditta	Formulazione	Classe tossic.	N° regis.	Principi attivi e prodotti comm.	p.a. g/l o kg	Ditta	Formulazione	Classe tossic.	N° regis.

PROGRAMMA PER LA GESTIONE DEI TRATTAMENTI

In qualsiasi vigneto, per portare a maturazione un'uva sana e di qualità, occorrono interventi di difesa per combattere le malattie fungine e da fitofagi.

Per ridurre al minimo i costi e le conseguenze negative derivate dall'impiego di fitofarmaci la prima regola è quella di conoscere bene i nemici da combattere (parassiti) e i mezzi di difesa.

Ad esempio, l'impiego di un principio attivo a dosaggio troppo basso o in un momento sbagliato, potrebbe non essere sufficiente per prevenire o curare un'infezione, mentre dosi esagerate e cadenze troppo ravvicinate sono sempre un errore, anche economico.

Vigneti diversi per posizione, altitudine e varietà, esigono interventi differenziati, anche come epoca. Così operando si ha anche il vantaggio di non costringere gli operai ad effettuare lavorazioni in verde su vigneti appena trattati.

Differenziare è giusto, ma comporta un maggiore impegno per la gestione dei vigneti (in particolare per aziende medio grandi) con il rischio di confusioni, eviabili solo con annotazioni puntuali di tutti gli interventi effettuati.

Allo scopo, anche per una sicura tracciabilità in alcuni casi espressamente richiesta, le soluzioni disponibili sono ormai innumerevoli. Noi proponiamo un programma molto semplice, ma già in grado di offrire una presentazione chiara e dettagliata imputando pochissime informazioni come di seguito spiegato.

A - La prima operazione, la più lunga almeno il primo anno, è quella di "caricare" i prodotti impiegati come indicato nella tabella 1. Basta scrivere il nome dei prodotti abitualmente impiegati e, almeno, la dose di impiego ad ettaro. Si possono scrivere anche prodotti non fitofarmaci (legacci, ecc.) e, ad esempio, gli operatori (trattoristi, ecc.). L'anno seguente sarà sufficiente aggiornare il programma con le eventuali nuove voci.

B - Nella tabella 2 (riferita ad ogni singolo vigneto con l'indicazione della superficie) sono già inseriti tutti i giorni del periodo primaverile-estivo. Alla data effettiva si potranno indicare le piogge, annotazioni varie e, il giorno del trattamento, semplicemente il numero di riferimento dei prodotti impiegati e eventualmente dell'operatore.

C - Questa tabella, studiata per avere in una sola pagina i mesi da aprile a settembre, si compila in automatico e riporta le piogge, il trattorista e i prodotti impiegati con la relativa quantità totale per quel vigneto (molto utile per un controllo incrociato sulle dosi effettivamente impiegate).

Tabella 1 - Archivio prodotti. In questa tabella e nelle successive i dati da immettere (indicati come esempio) sono in blu. Quelli in nero fanno parte della tabella, mentre quelli in grigio appaiono in automatico

		Prodotti	Principi attivi, ditte, ecc.	Dose kg-/ha standard	Dosi kg-/ha cons.	Dosi kg-/ha effettive
OIDIO	1	Antioicoido A	Antioicoido A (p.a.% o g/l - Ditta)	0,25		0,25
